## Discussion Note: Wang & Sun

#### Yen-Chieh Liao

The Centre for Artificial Intelligence in Government, University of Birmingham

2025 APSA CGOT

13 September 2025

#### **Similarities**

- Study Taiwanese legislators in the same institutional context
- Emphasize strategic political behavior
- □ rational choice → motivation → reelected

#### **Differences**

- Sun:
  - Top-down perspective

- Wang:
  - Bottom-up perspective

#### **Similarities**

- Study Taiwanese legislators in the same institutional context
- Emphasize strategic political behavior
- □ rational choice → motivation → reelected

#### **Differences**

- Sun:
  - Top-down perspective
  - Quantitative analysis, 2012-2024, NLP +
    Hypothesis Testing

- Wang:
  - Bottom-up perspective
  - 2018 fieldwork, Legislators' participation in constituents' private events

#### **Similarities**

- Study Taiwanese legislators in the same institutional context
- Emphasize strategic political behavior
- □ rational choice → motivation → reelected

#### **Differences**

- Sun:
  - Top-down perspective
  - Quantitative analysis, 2012-2024, NLP +
    Hypothesis Testing
  - □ Electoral competition → Legislative strategic calculation → Emotional rhetoric choice → Media attention → Electoral benefits

#### • Wang:

- Bottom-up perspective
- 2018 fieldwork, Legislators'
  participation in constituents' private
  events
- Voters' status needs → Invitation to legislators → Performative responsiveness → Social status enhancement → Political support reciprocity

#### **Similarities**

- Study Taiwanese legislators in the same institutional context
- Emphasize strategic political behavior
- □ rational choice → motivation → reelected

#### **Differences**

- Sun:
  - Top-down perspective
  - Quantitative analysis, 2012-2024, NLP +
    Hypothesis Testing
  - □ Electoral competition → Legislative strategic calculation → Emotional rhetoric choice → Media attention → Electoral benefits
  - □ Electoral competition pressure →
    Emotional rhetoric strategy

#### • Wang:

- Bottom-up perspective
- 2018 fieldwork, Legislators'
  participation in constituents' private
  events
- Poters' status needs → Invitation to legislators → Performative responsiveness → Social status enhancement → Political support reciprocity
- Performative response

### Wang's Performative Responsiveness

#### **Strengths**

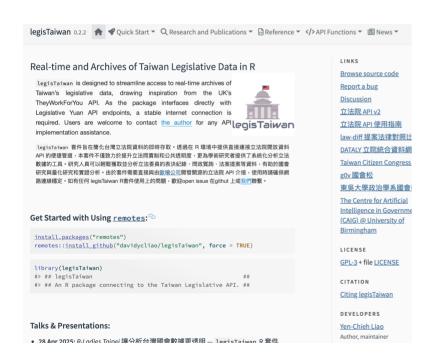

- Expanding Clientelism Research: Extends from political (e.g., distributive/pork) benefits to
  symbolic representation/benefits
- Applies Goffman's "front stage/back stage" concepts to analyze how politicians strategically perform intimate relationships

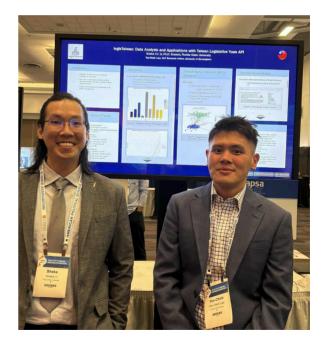

#### **Conceptualization Comments**

- The operationalization of "performative responsiveness" remains unclear
- → Some Latin American /African politics literature or pork barrel behavior literature might help you with theoretical construction
- Theoretical Dialogue to Grandstanding Literature (Slapin et al., 2018; Park, 2023; Lewallen & Park, 2024)
- → Extraposition taking → Attention seeking

### Wang's Performative Responsiveness

#### Future Work: Apply your theory to more empirical analyses

### Sun's Strategic Use of Emotions

#### Strength

- Utilizes fine-tuned models for sentiment analysis ≅ Electoral Systems & Geographically
  Targeted Questions (Liao & Tang, working paper)
- Contribution: stronghold measurement for SMD

#### **Comments**

- Dialogue with Grandstanding Literature (similar to Wang's paper):
- Merge H1 + H2: Consider developing conditional hypotheses extending to:
  - go more beyond: intraparty competition
  - Municipality homogeneity's effects (industry composition, education levels, Liao and Tang 2025)
- Fine-tuning Performance: Google BERT or Taiwan's models?
  - ${ ilda } o$  Human Validation: Recommend random sampling of 5% for manual verification
- Sentiment Detection Refinement: Consider fine-tuning specifically for negative language + hate speech detection (Wang & Day 2022)
  - $^{\scriptscriptstyle \text{\tiny D}} \rightarrow \text{extension toward populism speech?}$

# Thank You
